## Invitation :

It is our pleasure to invite all Pathologists who play a significant role in diagnosis and management of patients with lumps. We are happy to put before you a program targeting postgraduates, faculty and Practitioners. The theme of the workshop “**Breast – Mammary Panorama & “Guided FNAC- Exploring the remote”**”, will bring together international experts to share their knowledge and vast experience with us. A palpable or non-palpable abnormality in the breast is a common riddle which summons a question, whether it is benign or malignant? Among the triple test for palpable breast masses, FNAC is diagnostically superior and safe. In this workshop the topics are practice orientated and the hitches encountered during reporting FNAC of benign and proliferative lesions with and without atypia will be covered in detail. The unique feature of this workshop is that the lecture sessions will be backed by practical demonstration of cytology and histopathology slides.

Many organs are not easily accessible to aspiration and blind FNA leads to inadequate sampling. With the easy availability of imaging techniques this problem can be solved by performing FNA under guidance (Ultra sound , CT scan ,MRI ) The workshop is an attempt to familiarise participants in the nuances of guidance technics and fine needle sampling of various organs. Smear making and basic processing would be demonstrated. A holistic and systematic approach to the cytology of myriad lesions will be covered.

The renowned faculty for this teaching program have spent long years in cytology and histopathology diagnostic services in Government Medical College and Hospital Nagpur Maharashtra, Which is a premier institute for cytology in the country. The cytology department is accredited by IAC since the last 25 years and regularly trains observers from across the contry. It also offers one month of fellowship to the deserving candidates. Since last ten years this faculty has conducted similar workshops at renowned medical colleges.

We assure you two days of “full immersion in cytology”. We look forward to you with a good feast of academics and hospitality!!
